INSTRUCTIONS FOR USING SMART TV IN GREEN ROOM

1. Plug the cords from the computer and the television in at the wall, and turn on the power.

2. Use the HDMI cable to connect the computer, to the back of the TV. (I usually use the HDMI2 port)

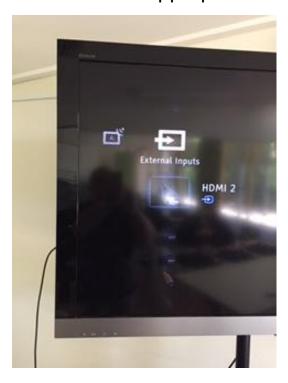

3. Turn on the laptop using the on/off switch at the top of the keyboard.
4. Go to the file or app that you want to use and open it.
5. Turn on the TV using the top, right green button on TV control.

6. Choose the home button on the TV remote. Use the back and forth to choose 'External Inputs' then the up and down to choose the appropriate HDMI input. (I usually use HDMI2)

7. The screen should now display what is open on the computer. If it is not full size on the TV, use the sizing button to try out different options.
